# INTRO TO COMPETITIVE PROGRAMMING

**WORKSHOP #1** 

MONDAY, MARCH 25TH • 5:00 - 6:30 PM

Lower Napier - LG21

## WHO'S HERE?

Everyone is going to have slightly different experience

- No programming experience?
- Currently doing IP?
- Currently doing Matlab?
- Current doing OOP?
- Finished OOP?

### WORKSHOP STRUCTURE

Intro to Competitive Programming Talk
~45 Minutes

- What is Competitive Programming?
  - What is the ACPC?
- How do I write/submit a program?
  - What competitions are there?
    - How do I learn more?

Workshop and Solving Problems ~45 Minutes

- Chance to submit first competitive programming solutions
  - Get to know HackerRank
- Learn basic c++ and competitive programming skills

## WHAT IS COMPETITIVE PROGRAMMING?

Competitive Programming is about working together in a team to solve challenging programming problems within a time limit

(but it's fun I promise)

#### Problem C Candy Sales

Time limit: 8 seconds

Cathy's favourite candy brand is releasing n new flavours of candy: one new flavour on each of the next n days. A pack of candy flavour i (the new flavour released on the  $i^{\text{th}}$  day) will cost  $w_i$  dollars on the day that it is released, but in order to encourage customers to try the new flavours, each candy flavour increases in price by one dollar on each day after it has been released. Precisely, on day  $j \geq i$ , a pack of the candy flavour released on day i costs

 $w_i + (j-i)$ 

Cathy wants to buy exactly one pack of candy on each one of the next n days and wants to get the most candy for her money. Calculate the price of the cheapest pack of candy available on each of the next n days. There is an unlimited number of packs of each flavour of candy and each flavour is available on the day of its release and all subsequent days.

#### Input

dollars.

The input consists of two lines. The first line contains an integer n ( $1 \le n \le 200\,000$ ), which is the number of flavours. The second line contains n integers  $w_1, w_2, ..., w_n$  ( $1 \le w_i \le 100\,000$ ), where  $w_i$  is the initial price of the i<sup>th</sup> candy flavour in dollars.

#### Output

Display n integers, the  $i^{th}$  of which is the price of the cheapest pack of candy that Cathy can buy on day i.

Sample Input 1	Sample Output 1					
4 3 6 7 4	3 4 5 4					
Sample Input 2	Sample Output 2					

### **COMPETITION RULES**

- Compete in teams of three people
  - One computer per team
- Can bring in as many hand-written or printed notes as you like
- Can use a variety of different programming languages (eg. C++, Java and Python)
- Not allowed to use the internet (apart from accessing the programming language documentation)

#### **Scoreboard South Pacific ICPC Divisional Finals 2018**

#### final standings

#### **CLUB ACTIVITIES**

#### So what do we do at the ACPC?

- Contests and Programming Competitions
  - We run practice contests such as the ANZAC rounds
  - We work with companies to run company-oriented competitions
  - We prepare for the ICPC
- We organise industry events
- We run workshops (for both new and advanced programmers)
- We organise mock interviews

# QUESTIONS?

# LETS WORK THROUGH A PROBLEM

Given an array of integers, find the sum of its elements.

For example, if the array ar=[1,2,3], 1+2+3=6, so return 6.

#### **Input Format**

The first line contains an integer, n, denoting the size of the array.

The second line contains n space-separated integers representing the array's elements.

#### Constraints

$$0 < n, ar[i] \leq 1000$$

#### **Output Format**

Print the sum of the array's elements as a single integer.

#### Sample Input

6 1 2 3 4 10 11

#### Sample Output

31

#### Explanation

We print the sum of the array's elements: 1+2+3+4+10+11=31.

# COMPETITIVE PROGRAMMING C++ TEMPLATE

```
#include <bits/stdc++.h>

using namespace std;

int main() {
    // solution comes here
}
```

## INCLUDING LIBRARIES

# Regular C++ Way

```
#include <iostream>
#include <string>
#include <vector>
#include <algorithm>
...
```

# Competitive Programming Way

#include<bits/stdc++.h>

## **READING INPUT**

```
int a, b;
string x;
cin >> a >> b >> x;
```

123 456 monkey

123 456 monkey

## READING INPUT

```
6
1 2 3 4 10 11
```

```
int n;
cin >> n;

int vals[n];
for (int i = 0; i < n; i++) {
   cin >> vals[i];
}
```

## WRITING OUTPUT

```
int a = 123, b = 456;
string x = "monkey";
cout << a << " " << b << " " << x << "\n";</pre>
```

```
int a = 123456789;
int b = a * a;
cout << b << endl; //-1757895751</pre>
```

```
int a = 123456789;
long long b = a * a;
cout << b << endl; //-1757895751</pre>
```

```
long long a = 123456789;
long long b = a * a;
cout << b << endl; //15241578750190521</pre>
```

```
long long a = 123456789 * 123456789;
cout << a << endl; //-1757895751</pre>
```

```
long long a = 123456789LL * 123456789LL;
cout << a << endl; //15241578750190521</pre>
```

## C++ BASIC DATA TYPES

Data Type	What it stores
int	An integer between $-2*10^9$ and $2*10^9$
long long	An integer between $-9*10^{18}$ and $9*10^{18}$
float	A decimal number usually with about 7 decimal digits
double	A decimal number usually with about 15 decimal digits
string	Any text, e.g. the work "monkey"
Arrays (e.g. int[100])	Fixed size list used to store a bunch of the same data type together
Vectors(e.g. vector <int>)</int>	Dynamically sized list used to store a bunch of the same data type together

# IF, WHILE AND FOR

```
int x = 5;
if (x < 10) {
    cout << "x is less than 10" << endl;
}
else if (x < 20) {
    cout << "x is between 10 and 20" << endl;
}
else {
    cout << "x is greater than 10" << endl;
}</pre>
```

```
int x = 5;
while (x < 10) {
    cout << "x is currently " << x << endl;
    x++;
}</pre>
```

```
for (int x = 0; x < 10; x++) {
   cout << "x is currently " << x << endl;
}</pre>
```

```
#include <bits/stdc++.h>
using namespace std;
int main() {
    int n;
    cin >> n;
    int vals[n];
    for (int i = 0; i < n; i++) {
        cin >> vals[i];
    int total = 0;
    for (int i = 0; i < n; i++) {
        total += vals[i];
    cout << total << endl;</pre>
    return 0;
```

## COMPILING/RUNNING

```
g++ -std=c++11 -02 -Wall test.cpp -o test
```

```
    bsmart@DESKTOP-1PPCH2K:/mnt/c/Users/brand/Dropbox$

bsmart@DESKTOP-1PPCH2K:/mnt/c/Users/brand/Dropbox$ g++ test.cpp

bsmart@DESKTOP-1PPCH2K:/mnt/c/Users/brand/Dropbox$ ./a.out

6
1 2 3 4 10 11
31
bsmart@DESKTOP-1PPCH2K:/mnt/c/Users/brand/Dropbox$
```

# QUESTIONS?

# **COMPLEXITY**

input size	required time complexity
$n \le 10$	O(n!)
$n \leq 20$	$O(2^n)$
$n \le 500$	$O(n^3)$
$n \le 5000$	$O(n^2)$
$n \le 10^6$	$O(n \log n)$ or $O(n)$
n is large	$O(1)$ or $O(\log n)$

AtCoder Project Euler

### COMPETITIONS

- The major competitive programming event for university students is the International Collegiate Programming Contest (ICPC)
  - Practice rounds for this competition are called ANZAC rounds, and will run throughout the year (tune into Facebook for notifications)
  - The ICPC has Divisional Finals, Regional Finals and World Finals

- We (the ACPC) also regularly host independent events (again tune into Facebook)
- Online programming contests are also held regularly by Codeforces, AtCoder, CS Academy, HackerRank, Topcoder and others

### **NEXT COMPETITION**

ANZAC Round #1 was last Saturday...

But Join Us For:

ANZAC Round #2

Saturday, 13<sup>st</sup> April (probably)

(Tune into Facebook)

Maptek are also on campus on Wednesday so join us for that

# QUESTIONS?

#### WORKSHOP QUESTIONS

#### HackerRank

<u>https://www.hackerrank.com</u>
(we recommend writing each problem from scratch)

#### Questions for C++ newbies:

- Solve Me First, Simple Array Sum, A Very Big Sum, Plus Minus, Birthday Cake Candles

#### Questions for First Years:

- Sock Merchant, Electronics Shop, Birthday Chocolate, Picking Numbers, Strange Advertising

#### Questions for Non-First Years (Difficult):

- Forming a Magic Square, Sherlock and Valid String, Non-Divisible Subset, Bigger is Greater

```
#include <bits/stdc++.h>
using namespace std;
int main() {
    int n;
    cin >> n;
    int vals[n];
    for (int i = 0; i < n; i++) {
        cin >> vals[i];
    int total = 0;
    for (int i = 0; i < n; i++) {
        total += vals[i];
    cout << total << endl;</pre>
    return 0;
```

#### **NEXT WORKSHOP**

#### Next Workshop Will Be On:

# Sorting, Searching and Data Structures

Notifications about the when and where of that event will be on Facebook
